

Civil Work Capabilities

Whilst the company has completed a range of specialised projects, the key civil works include;

- Commercial and Residential Sub-Divisions,
- Stormwater Drainage Systems,
- Commercial Car Parks,
- Roadwork's Reconstruction, and
- Environmental and Soil Remediation.

DML has completed many projects as key contractor, taking responsibility for complete construction and liaising directly with consulting engineers, councils and government departments.

Some of these projects required a re-assessment of outcomes and the experiences of DML managers provided a better solution that embraced the engineering qualities and enhanced the environmental aspects.
